

UI Designer

Department : Development
Reports to : Development Director
Division : Abilene
Classification : Salary/Exempt/Full-Time

JOB SUMMARY

This UI Designer will work as part of our sustainable paced agile team to design and optimize applications to improve ease of use and create the best user experience. The work will be focused on conceptualizing new and innovative UIs and prototyping new concepts for customer-facing mobile applications and desktop applications for a wide variety of environments and devices. This Designer will be required to work on various products being developed in parallel. Not only will each product be required to have its own unique solution, but this Designer will be responsible for ensuring a consistent user experience throughout the product portfolio.

ESSENTIAL FUNCTIONS

- Works directly with the Development Director and Product Manager to design UI's, fix bugs, create new features and maintain Milsofts' software applications
- Builds new products and improves existing ones
- Understands the needs and challenges of the utility industry and provides assistance through routine consultation with company management, staff and other Developers to enhance customer satisfaction
- Maintains professional attendance, punctuality, personal appearance and adherence to health and safety procedures
- Upholds, safeguards and promotes Milsofts' values and philosophy of ethics, integrity and corporate responsibility
- Any other duties that may be necessary or assigned from time to time (such duties do not change the level of the job)

QUALIFICATIONS

- Bachelor's degree in Computer Science or related field
- 3+ years professional experience in software development
- Proficient with the entire UI/UX process including discovery, research, ideation, prototyping and validation
- Has the ability to create, refine, tweak apps and websites as well as create a digital experience that our users will like and find easy to use
- Knowledge of design patterns, algorithms, programming paradigms and front-end development best-practices
- Experience in developing front-end software, with deep experience in one or more relevant front-end frameworks (React, Angular, Unity, Xamarin, JQuery etc.), UI Test Automation frameworks and MVC frameworks
- Experience with view layout and rendering technologies (e.g., responsiveness, progressive enhancement, browser/device support)
- Experience with a broad range of software design approaches and common UX patterns and front-end software design patterns
- Demonstrated ability to achieve goals and handle multiple competing priorities in a highly innovative and fast paced environment

PREFERRED QUALIFICATIONS

- Master's degree in Computer Science or related technical discipline
- Advanced knowledge of web technologies and UI/UX standards
- Experience translating design mockups, prototypes and user stories into working applications
- Hands-on expertise using modern tools and environments (e.g., XML, HTML5, Javascript, mobile development, web services, version control systems, bug/issue tracking tools and deployment)
- Experience shipping mobile applications (Android or iOS)
- Experience and willingness to mentor more junior developers and help them grow their skills and leadership
