

Simplify Your View

Simplify and amplify your storm management capabilities by adding critical weather data over your Milsoft electric model. Why track weather on a separate screen when you can combine it with your outage map view? Operations personnel can now see all customers, outage data, and weather phenomena on a single screen.

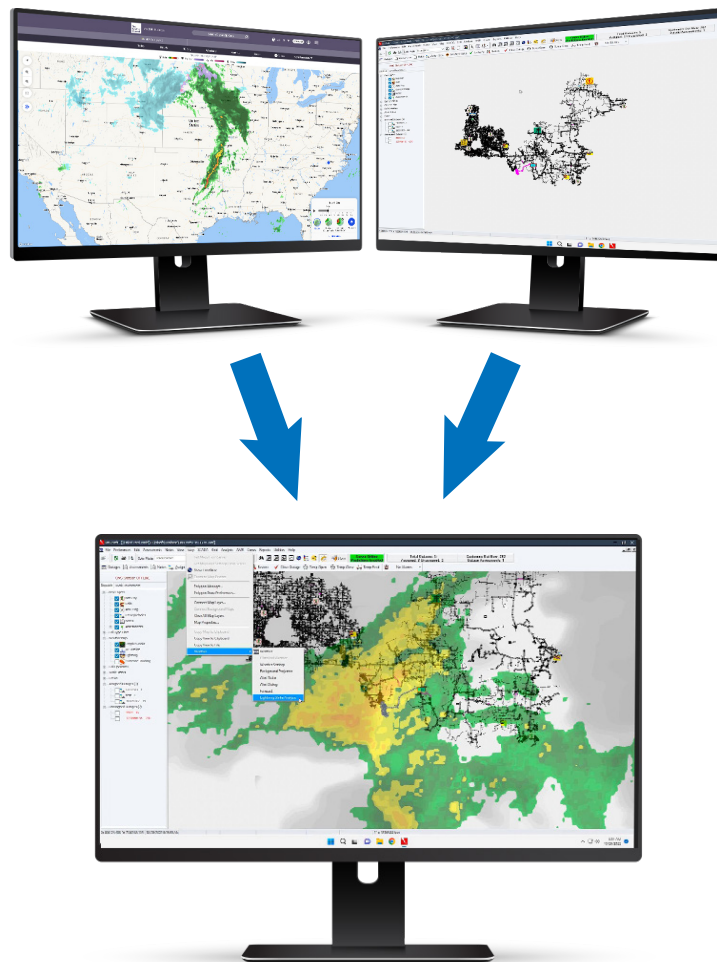

With weather insights from DTN now available for the *Milsoft Outage Management system, your dispatchers can view live weather and manage outages on one screen.

*DTN Weather is available only for Milsoft OMS desktop software.

Available Weather Views Now In MOS

- **Lightning** - Includes both cloud-to-cloud and cloud-to-ground lightning strikes up to a running 60 minutes
- **IR Satellite** - Latest global infrared satellite data
- **Radar** - Latest US radar data
- **Tropical Storm Forecasts** - Includes forecast track (line) and forecast cone, as issued by the National Hurricane Center
- **NWS Watches and Warnings** - Currently active watches, warnings, and advisories as published by the National Weather Service
